Why Join a Developer Circle?

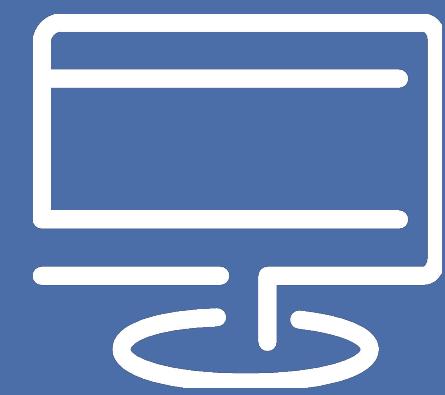

Connect with other
developers

Engage with local experts

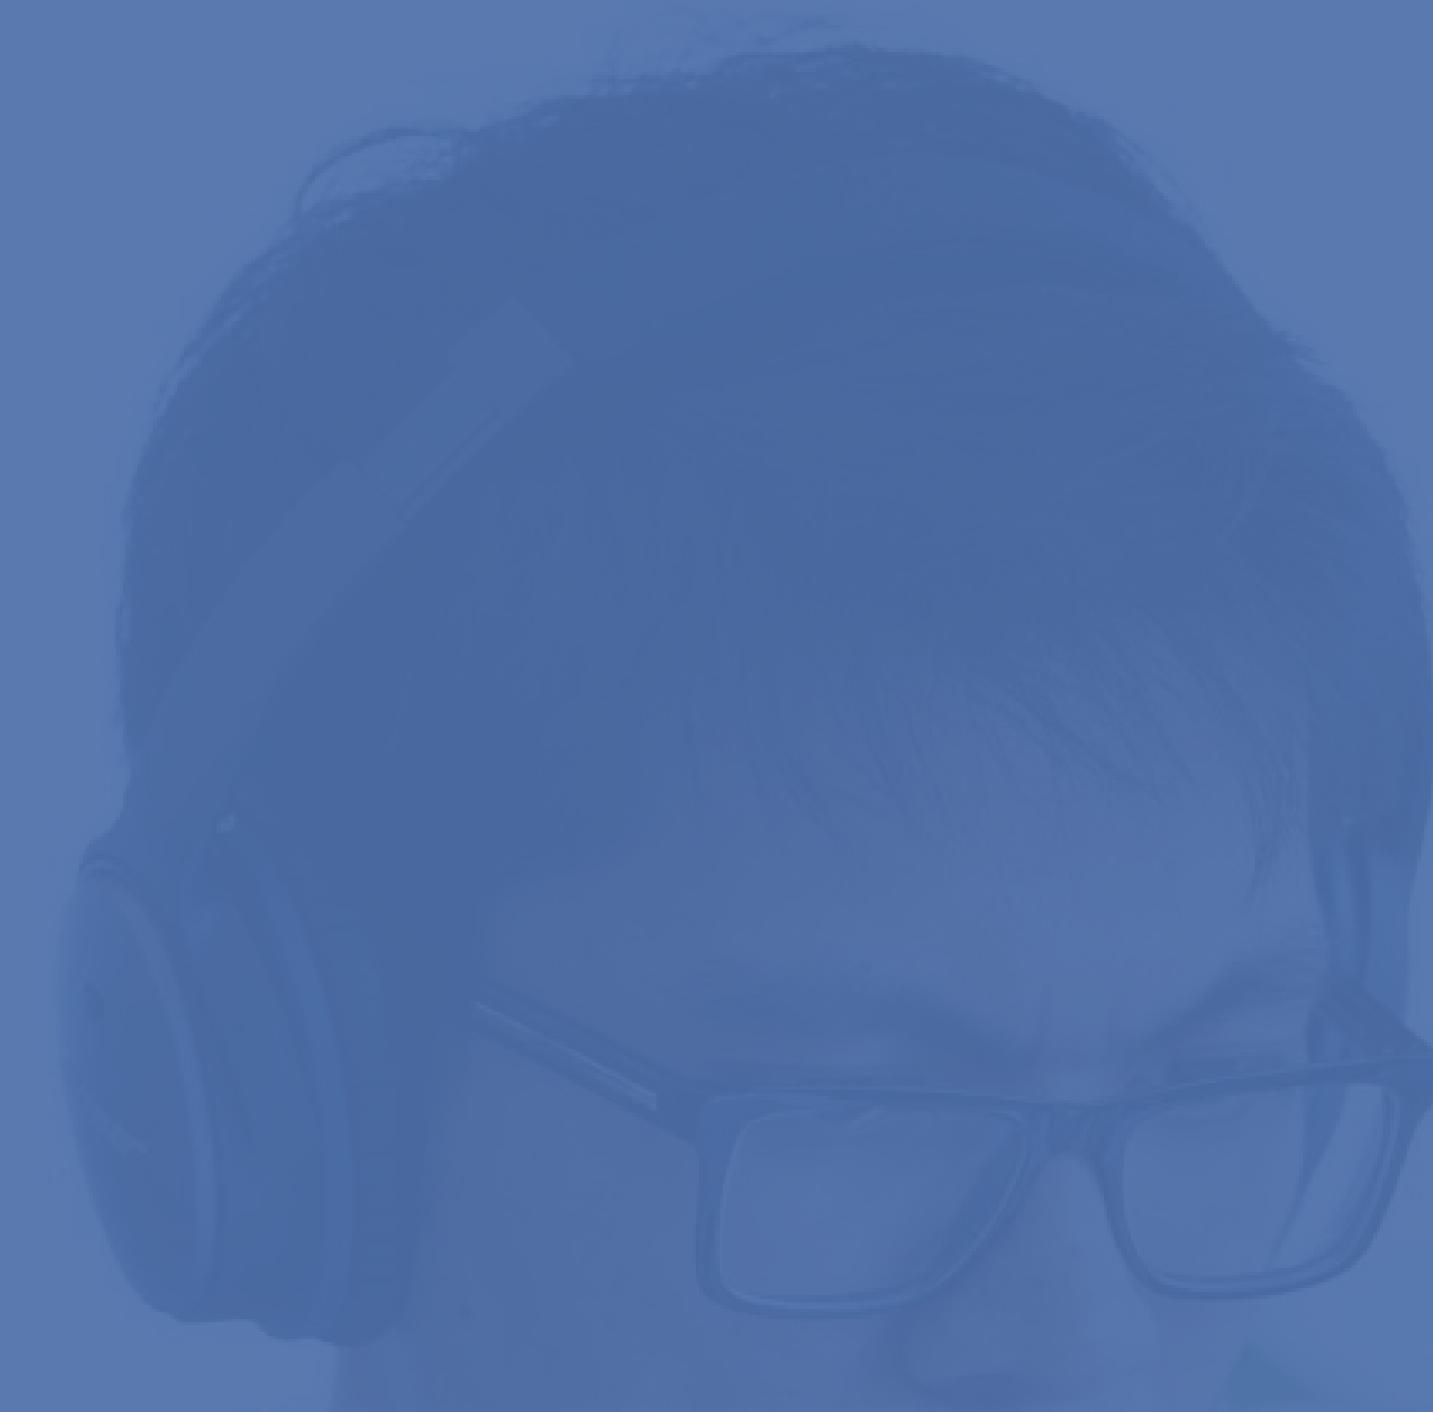

Learn about new tech

Build with other
developers

KEY TECHNOLOGIES

Facebook Login

Fast and safe authentication for millions

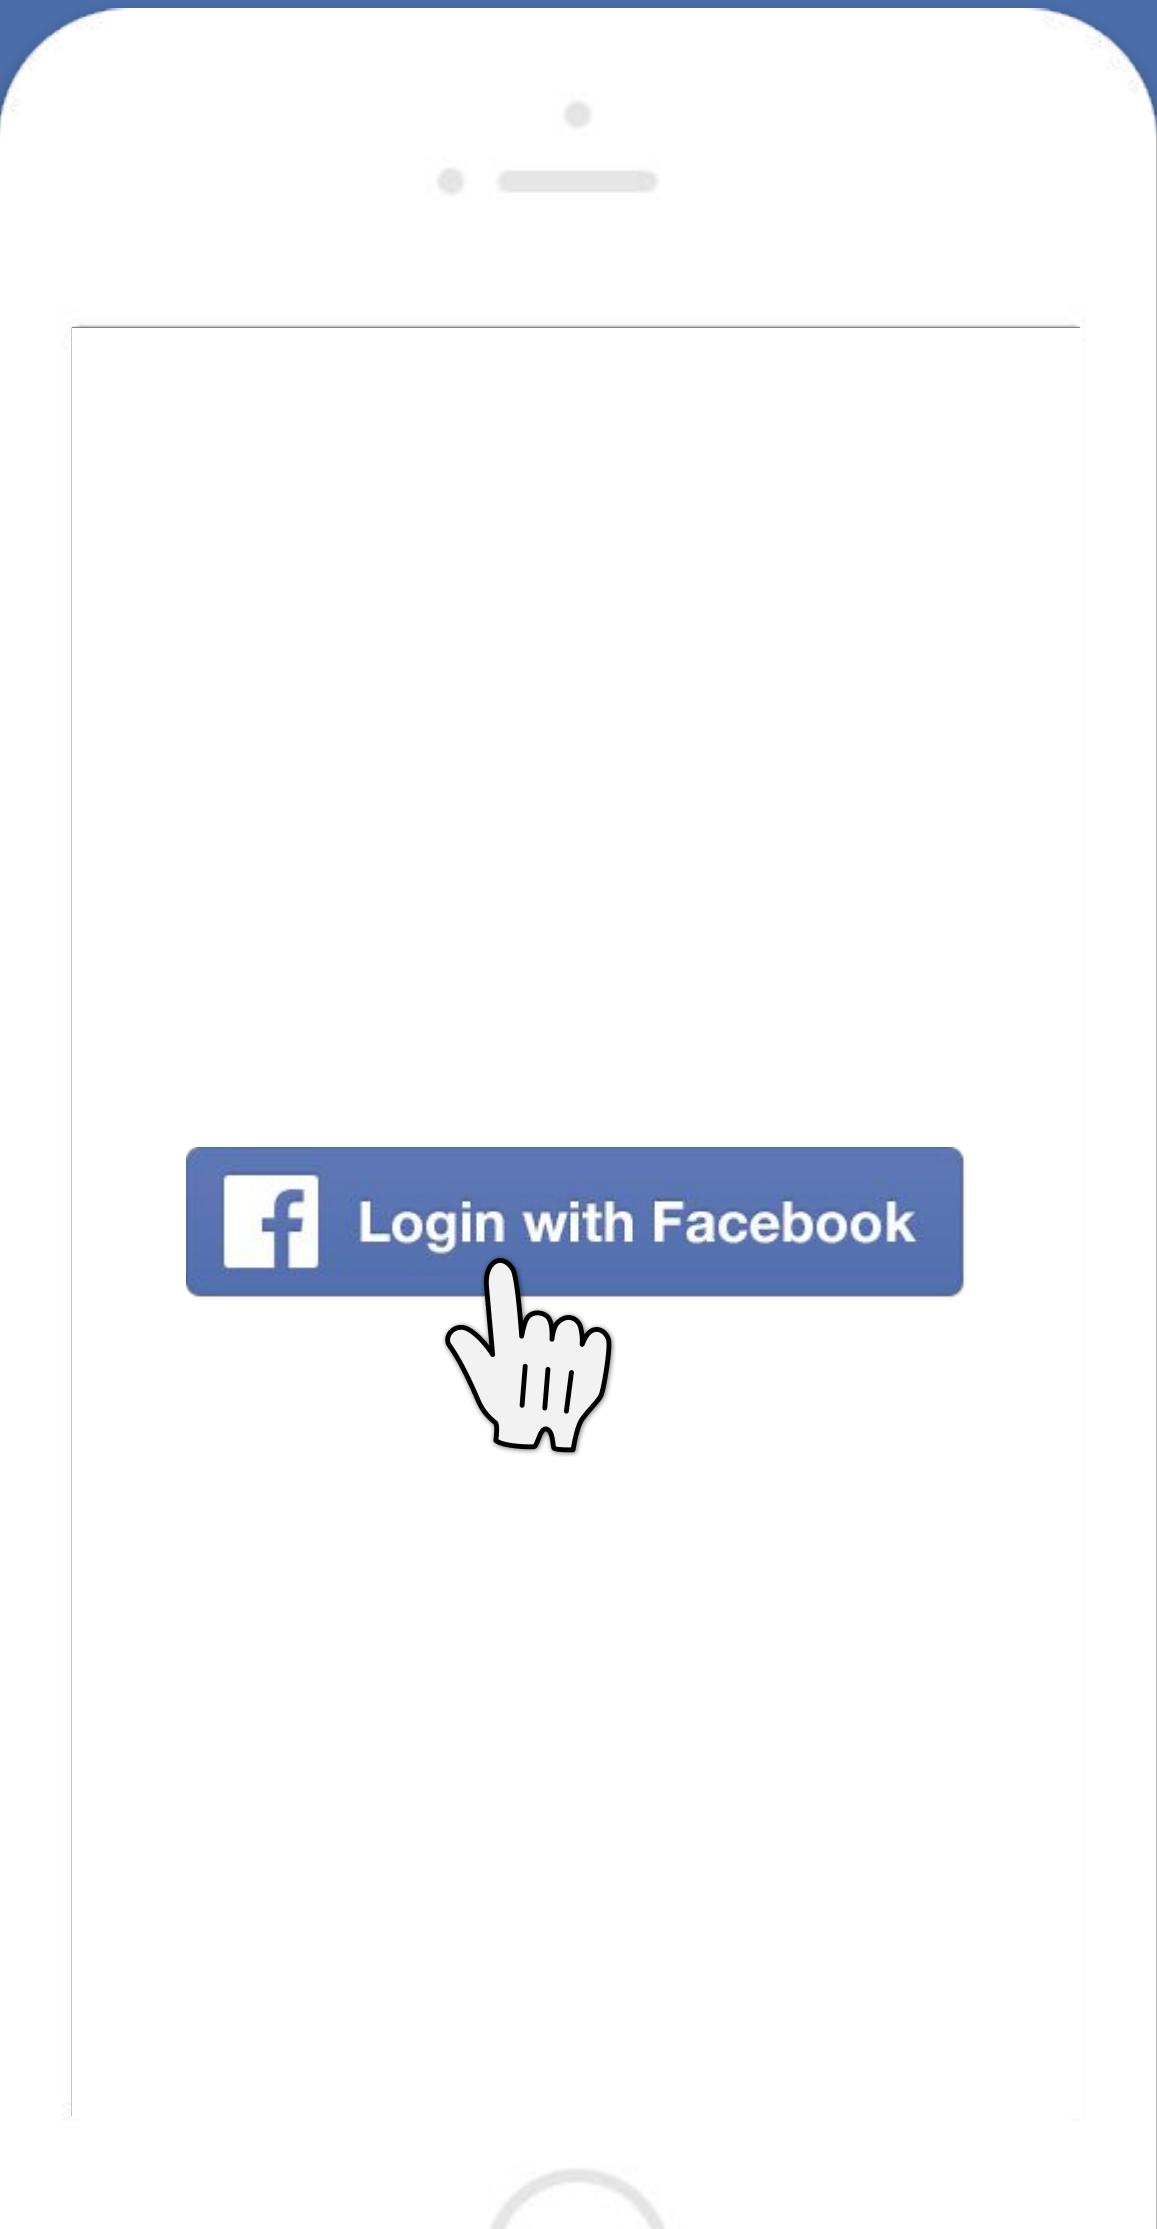

Gives people a fast & transparent experience when logging into apps

Gives developers an easy way to overcome conversion barriers and to jumpstart social experiences in their apps

Facebook Login works on multiple platforms and devices, and apps using the newest version of Facebook Login have an 11pp higher click through rate

BEST PRACTICES

- Use Login buttons from our SDKs for easy installation
- Make sure people know how their profile information is going to be used in your app

Analytics

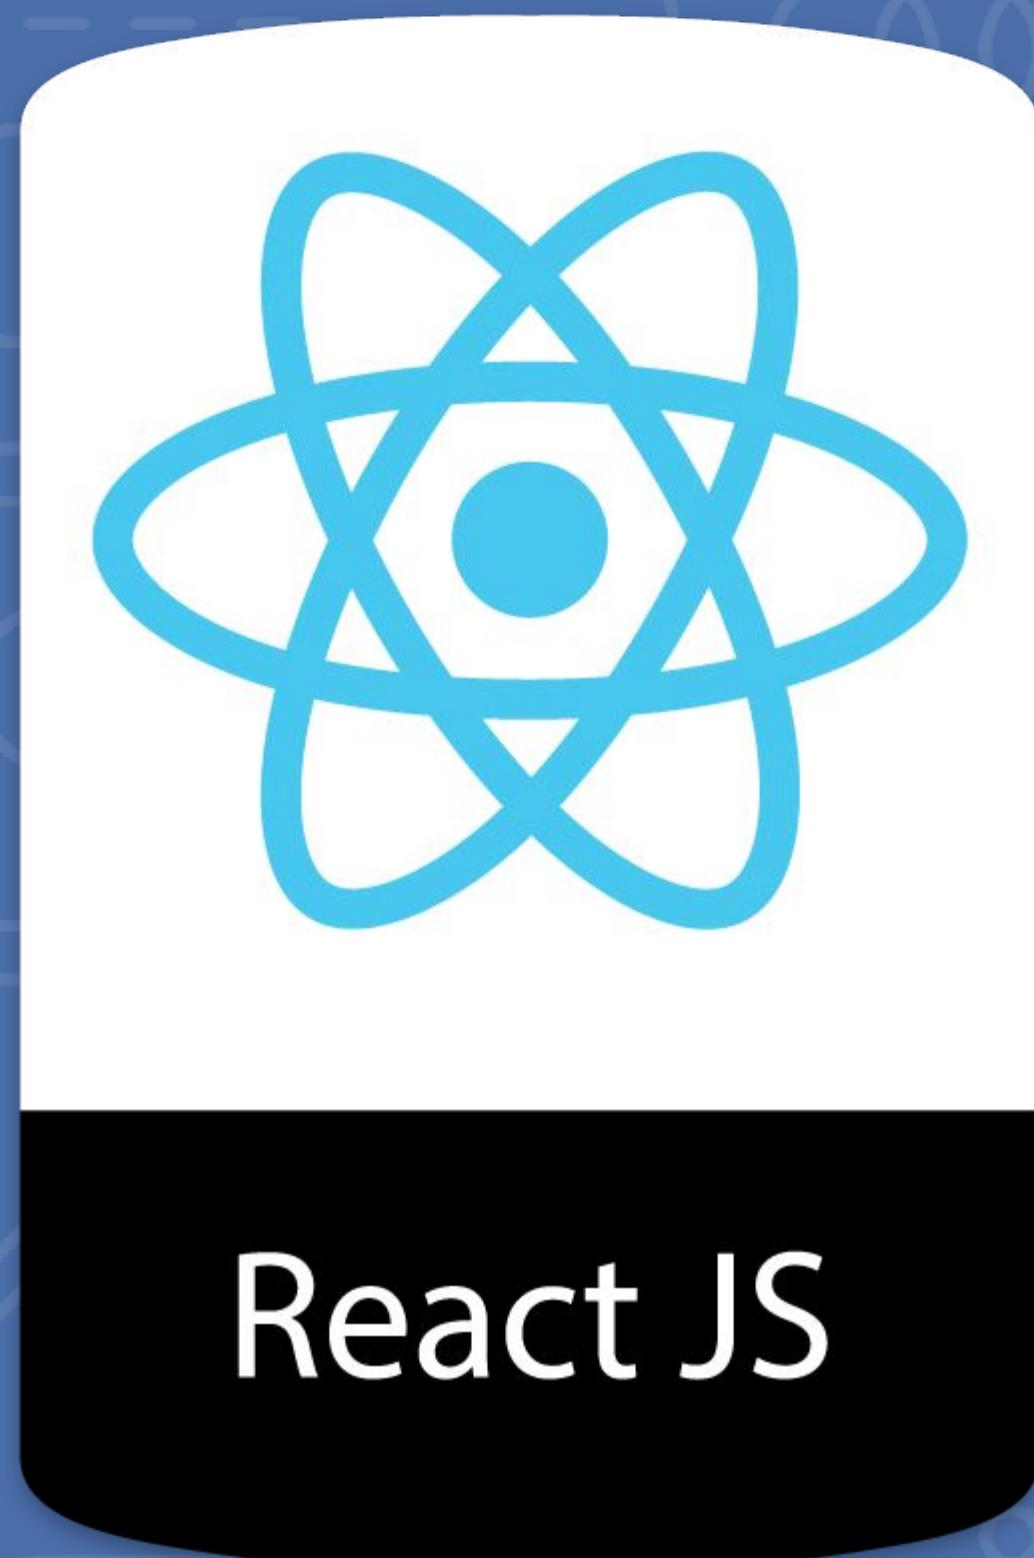

- Facebook Analytics for Apps
- App Events
- Page Insights
- Domain Insights

Bots for Messenger

Provides platform for creating custom real time experience of interaction with the clients on the messenger platform.

React and React Native

Javascript library for building User Interfaces

CORE FEATURES:

- ❖ Declarative
- ❖ Component-based
- ❖ Cross-Platform

facebook.github.io/react/

The Graph API

v2.10

The Graph API is the primary way to get data out of, and put data into, Facebook's platform. It's a low-level HTTP-based API that you can use to programmatically query data, post new stories, manage ads, upload photos, and perform a variety of other tasks that an app might implement.

Any feedbacks?

A man with short brown hair, wearing a light blue t-shirt, is seated at a desk in an office environment. He is facing away from the camera, looking at a computer monitor which displays a dark interface with some text or code visible. Behind him, there are several other computer monitors and office equipment. The overall atmosphere is professional and focused.

Thank You
